REMARKABLE POINTS ON THE MARKET

The market recovered “doubtfully” on Thursday. After a gloomy morning struggling around reference, the indexes gained strongly in the afternoon with consistent gain on many groups. The groups that dropped recently like petro, power, aqua products, seaport, and retail reversed with many codes gaining to the limit. Along with it, banking and securities also recovered so the indexes closed at day highest level. However, a remarkable point today was on liquidity as the value dropped strongly to the lowest level since December 2020. This showed that investors are being cautious.

TECHNICAL POINT OF VIEW

In technical term, VN-Index gained again. The volume dropped to below 10 and 20-session average, showing cautious cash flow. Not just that, the index closed below MA20, and MA5, 10, and 20 differentiated negatively, showing that the main trend is still dropping, this gain might only be technical. Moreover, MACD was below Signal, maining selling sign, and -DI was above +DI, showing correcting pressure, so the index might soon see correcting pressure again toward close support around 1,156 points or further on sentimental level of 1,100 points. For HNX, HNX-Index saw similar situation. It gained with lower volume than recent sessions, along with negative differentiating sign between MA5 and MA20, showing that the main trend is still dropping and the gain might only be a bull trap, with close resistant level around 296 points (MA20). In general, the market is on dropping trend, the gain on June 23 might only be a bull trap. Therefore, investors should consider using the recovery to bring the weight to safe level.
